HISENS
Professional photocell

Rankings Centre

HILINK
10mW or 500mW radio transmission system

ATPRO 2 Chronometers
Professional Portable Chronometer

MICROTAB LED
Scoreboard showing the time, including penalties

In detail

Endurance is the marathon of equestrian sport: an endurance race over very long distances (from 30 to 160 km) where the horse's health is the only factor that takes precedence over the chronometer. Timekeeping involves measuring not only the time taken to complete each loop, but also the veterinary time required to restore the horse to the physical condition stipulated by the regulations. The Microgate solution comprises traditional timekeeping using a HiSens photocell, an RTPro chronometer and a MicroTAB display board, with an additional RTPro chronometer for rest periods.
