In detail

Microgate's Self-Timing systems enable ski resorts to offer their guests the thrill of racing against the clock on fully automated slopes. Each run is managed independently: the competitor sets off when the run is clear, sees their time displayed immediately upon arrival, and the system automatically resets for the next user. Thanks to the use of FIS-certified Microgate technologies, the system guarantees professional-grade accuracy, maximum reliability and minimal maintenance, making it ideal for tourist runs, training sessions and promotional activities.
